

EMPLOYMENT STATUS FLOW CHART

These flowcharts show the variables and coding involved in the creation of employment status. Over the period 1991-2001 in the LFS, the employment status variable (which is one of the main components in NS-SEC derivation) is absent or incomplete. The flowchart describes the way the syntax works in order to create employment status during these years. The first flowchart reflects the derivation procedure for the reduced method. The second flowchart illustrates that procedure while the size of workforce has been taken into account. This is known as full method NS-SEC with 7 categories for employment status.

Flow chart 1: Reduced method

Flowchart 2: Full method
