Overview of ISIC code system

ESDS International

Author: ESDS International
Version: 0.2
Date: January 2004

Overview of ISIC code system

The International Standard of Industrial Classification of All Economic Activities (ISIC) code was developed by the UN as a standard way of classifying economic activities. The ISIC code groups together enterprises if they produce the same type of goods or service or if they use similar processes (i.e. the same raw materials, process of production, skills or technology). The ISIC system is now used widely by governments and international bodies as a way of classifying data according to economic activity. One key purpose of the code is to standardize data collection and promote international comparability.

The ISIC code is periodically reviewed as new types of economic activity become important and to harmonize with other classification systems. The original code was adopted in 1948. Revision 1 was issued in 1958. Revision 2 was published in 1968. All countries report to Revision 2 of the code. Revision 3 of the code was published in 1989. Most but not all countries now report to this revision. In May 2002, UNIDO released ISIC Rev.3.1. The UNIDO databanks have not yet adopted this updated version of the code.

The ISIC code covers all areas of economic activity but the UNIDO databanks only relate to the manufacturing section of the code. The code is organised hierarchically with each level containing an increasing level of detail. For example, manufacturing is subdivided into 29 categories at the 3 digit level and 81 categories at the 4 digit level. ISIC levels beyond 4 have been discontinued in the latest ISIC revision.

UNIDO Industrial Statistics are reported at ISIC levels 3 and 4 in two separate databases for Revision 2 data. For Revision 3, the Industrial Statistics at levels 3 and 4 are presented in a single database.

The Demand Supply database is built around ISIC level 4. Data for Revision 2 and Revision 3 of the ISIC code are presented in separate databases.

To see the ISIC 3 industrial categories for Revisions 2 and 3 of the code, see the [ISIC 3 and 4- digit level Table](#).

To see the ISIC 4 industrial categories for Revisions 2 and 3 of the code, see the [ISIC 4- digit level Table](#).

| | ISIC 3-digit, Rev 2 | ISIC 4-digit, Rev 2 | ISIC 3-digit, Rev 3 | ISIC 4-digit, Rev 3 |
|------------------------------|-----------------------------|-----------------------------|---|----------------------------|
| Industrial Statistics | 1963 onwards, 175 countries | 1981 onwards, 114 countries | Single database, 1990 onwards, 94 countries | |
| Demand Supply | Not available | 1981 onwards, 80 countries | Not available | 1990 onwards, 63 countries |

ISIC Combinations

Some of the ISIC categories are combined to form new classifications e.g. at the 4 digit level the combination ISIC 3841B consists of:

- 3841 ship building and repairing
- 3842 manufacture of railroad equipment
- 3844 manufacture of motorcycles and bicycles
- 3845 manufacture of aircraft

All the databases contain some of these ISIC combinations. Unfortunately UNIDO only provides definitions of these in terms of the original code numbers, so the user may need to work backwards from these numbers to find the descriptions.

ISIC combination code lists are provided for:

- [3-digit level, Revision 2](#)
- [3 and 4-digit level, Revision 3](#)
- [4-digit level, Revision 2](#)

The Classifications Section (<http://unstats.un.org/unsd/class/default.htm>) of the United Nations produces more general information and news about the ISIC code and other UN classification systems.

ISIC codes at the 3 and 4-digit level

International Standard Industrial Classification of all economic activities (ISIC), at the combined 3 and 4-digit level, Revision 3 and at the 3-digit level, Revision 2

| REVISION 3 | | REVISION 2 | |
|------------|---|------------|---|
| Code | Industry | Code | Industry |
| 151 | Processed meat, fish, fruit, vegetables, fats | 300 | Total manufacturing |
